

eMedApps Good Faith Estimator for NextGen™

Ensure trust between patient and practice

With the Good Faith Estimator Solution, you can provide customers with your best estimate for services, so patients are not blindsided by pricing, ensuring trust between patient and practice.

The eMedApps Good Faith Estimator allows the practice to take advantage of NextGen's cost estimator utility, while also meeting the CMS required criteria to include CPT and ICD10 codes on patient documentation.

There is no configuration needed for the eMedApps Good Faith Estimate Solution. The application takes advantage of the eMedApps CareBridge™ solution to create documents within NextGen on each individual patient chart.
