

# MTS Automate Agent

Automatically remediate common IT issues, prevent recurring problems.

MTS Automate is a Remote Management and Monitoring (RMM) Agent. Med Tech Solutions implements this automation agent to access servers and workstations for maintenance and troubleshooting. Automate is capable of patching Windows and third-party software, as well as alerting if certain events occur such as low disk space, Operating System errors, and more.

For clients that only require Med Tech Solutions to remotely access the server for maintenance and troubleshooting, all of these features are disabled so to not interfere with internal processes. The Automate agent will only be used for the sole purpose of remoting into the device.

Employ MTS Automate Agent and enjoy these benefits:

- More proactive monitoring and support
- Practical and effective technology insight
- Additional time savings
