

Availity Medical Attachments

Reduce paper-based processes and improve the provider experience.

Processes that require faxing or mailing medical documentation are still a big part of the healthcare industry. Availity is working with payers and providers to reduce the cost and inefficiency of paper. Availity Essentials allows providers to electronically attach supporting documentation for many workflows, including claims, prior authorizations, overpayments, and appeals.

Reduces paper and mail costs

Rather than mail letters requesting supporting claim documentation, providers can upload the files from within their workflow. Essentials supports multiple file formats, including PDF, JPEG, TIFF, PNG, GIF, CCDA, and more. File sizes vary based on payer requirements.

Streamlines processes

Many payer-provider workflows take longer than they should because they are missing required documentation. With Essentials, providers can upload documentation as part of the workflow, which is faster than faxing or mailing and reduces the chance of lost documentation.

Submit electronic attachments for claims

Prior Auths

Overpayments

Appeals

NextGen[®] EHR Connectivity
Powered by CareBridge[™]
from Med Tech Solutions

CareBridge[™] from Med Tech Solutions streamlines processes that require transmission of medical documentation. With the CareBridge[™] plug-in, providers can easily select relevant patient documentation in a NextGen[®] EHR template, export the documentation, and automatically submit for claims.
