

# Medication Favorites Manager for NextGen™ Ambulatory EHR

Copy medication favorites list and make using them easier!

You and your staff are busy! Automate your immunization reporting, keep your patient immunization records up-to-date and complete, and safeguard against the potential for human error with this new immunization reporting tool.

In NextGen, providers can create a list of favorite medications, but those lists cannot be shared between providers. With this solution you can:

- Copy medication lists from provider to provider
- Reset the favorites list
- Set a default favorites list for your searches

Where this solution helps:

- A provider has a good list and wants to share it with other providers
- A new provider comes on board and you want the lists to be standard and not have to go through the work of recreating the list
- You have an in-house pharmacy and want the default medication list for searches to be their list from your pharmacy rather than the entire medication list
